---

Paul and Warner Body Builders is Australia's premier supplier of emergency response vehicles and associated equipment. Our operations are located at Bassendean and Bayswater in Western Australia.

Our main work functions include the use of heavy machinery. We have been conscious of our overhead costs for many years, one of which was our electricity usage which is critical to the business's success.

We engaged the services of Project GreenPower to carry out some data analytics and come up with a satisfactory solution to reduce our exposure to the mains power grid. Project GreenPower consultants assessed our buildings and produced a model which allowed the organisation to drive down its energy spend. A 40kW energy farm was installed on both factory roofs.

I have been very satisfied with the efforts of Project GreenPower. So impressed, I have employed them to install a solar PV system on my home as well.

Yours sincerely  
Mike Paull  
Managing Director
